

## Supply Chain Management (SCM)

### What is SCM?

Today's dynamic industry must simultaneously deal with rapid customization to satisfy consumer demands, stock market pressures to increase financial performance, and the complexities of increased globalization. This is reflected in the manufacturing and logistics challenges for:

- Managing production / assembly and distribution complexities of custom made products
- Creating mission critical processes to minimize the impact of shorter lead time requirements
- Responding to rapid changes in real time
- Pushing responsibility up the supply chain
- Reducing inventory throughout the supply chain
- Purchasing
- Vendor development and Vendor Managed Inventories (VMI)
- Supply Chain Overall system Design,

For customers & vendors this puts tremendous strain on their manufacturing strategies and supply chains to deliver quality products on-time to meet complex & demanding market requirements. Only companies with the most agile and integrated manufacturing and logistics strategies and technology will succeed in adapting to these demands effectively. This is the whole ambit of SCM (Supply Chain Management)

### How Quantact Consulting can assist you

- **Procurement System Survey:** This can provide a strategic road map for improvement
- **Setting up Procurement System** with guaranteed cost reduction
- **Inventory System Survey :** To suggest effective changes with benefits
- **Inventory System Audits :** To improve performance
- **Supply Chain Survey** to identify weak areas & opportunities for improvements
- **Supply Chain Audits** to ensure system effectiveness.
- Supply Chain **Integrated Support** including implementation of proposals

## **Special Focus:**

Based on experience of professional team at Quantact consulting we will offer special focus on

- Multi-Plant supply & central planning system
- Warehouse and Dealer inventory planning
- Establish Entitlements (Budgets) in measurable buckets at various links
- Setting up an effective and fair system for monitoring & control
- Spares Planning & Inventory Control
- IT enablement
- Establish Global Logistics systems
- Forward Buying, E-bidding

## **How SCM Improvements will help you**

- At the front end to the customer, you will see significant enhancements in your service level/ deliveries either directly or thru warehousing and Dealer Inventory system with optimum physical & in-transit stocks in the chain.
- At the production centers you will observe smoother planning systems with minimum inventories
- In purchasing you will note measurable improvements in total costs as well as just required inventories in stores.
- In totality you will be able to drive down substantial costs to stay competitive.
- You will successfully synchronize supply and demand, attain a transparent supply chain and establish an integrated transportation network so your products were always available – whether on the store shelf or ready for shipment.
- The present battles are the battle of Supply Chains and not products.
- Efficiencies and ownership/accountabilities are inbuilt in the system design.
